**Proposal ID** 6998  
**Submitted On** Sep 7 2018 1:08AM  
**Title** SecSIG "Mind mapping for the stable genius"

## Proposal Info

**Abstract/Description** This presentation focuses on a new methodology for mind mapping that uses not hierarchical object modeling using "The Brain" (thebrain.com). The demonstration first shows how a new "brain" is created and then uses an existing and extensively developed "brain" that the speaker has developed over the last year. The participants will learn how to dump all of their thoughts into a non-hierarchical system that allows for every idea to have multiple parents, children and peers. This tool is fantastic for anyone who has more ideas than what can be reasonably managed. It also works great for teams. How this model works in larger environments can also be discussed.

## Presenter(s) Details

**Presenter Name** Mr. Bill Weber  
**Suffix**
